## WORK EXPERIENCE

### Freelancing and Full Stack Developer In Ashewa Technology

Full Stack Developer

Jun 2022

- I specialize in modern JavaScript and Typescript ecosystems and clean, maintainable architectures—both monolithic and microservices.
- Designed and developed full-stack web applications using React.js, Next.js, Node.js, Express.js, WebSockets, Tailwind CSS, Postgres, MongoDB, and MySQL with both Prisma and Sequelize ORM.
- Seamlessly integrated complex RESTful and GraphQL APIs to connect front-end interfaces with back-end services, ensuring efficient data flow and optimal application performance.
- Version Control Mastery (Git): Deep understanding and application of Git principles for efficient code management, including advanced branching strategies (e.g., Git Flow, GitHub Flow).
- Implemented full-stack error handling mechanisms, utilizing blocks and asynchronous error handling middleware (e.g., Express error handlers) on the backend and Error Boundaries in React on the frontend to prevent application crashes and ensure graceful degradation.
- Integrated WebSockets (using Socket.IO) on both the frontend and backend to enable real-time communication features such as live notifications, dynamic order status updates, and instant messaging, enhancing user engagement and responsiveness of the application.

### Software Engineer | Eagle Lion Technology

Back End Developer

Septamember - 2025 - present

- Developed and maintained a fintech superapp platform using microservices and monorepo architecture. Built scalable backend services in TypeScript/Node.js with Express, covering authentication, user management, messaging, banking integrations Dashen Bank, Mpesa, Telebirr, transaction processing, airtime topups (Ethio Telecom, Safaricom), and utility payments (DSTV, school fees, Flygate). Implemented services using MongoDB, Redis, Prisma, Kafka, and Docker, organized in Nx monorepos. Designed RESTful APIs with authentication, rate limiting, and error handling. Collaborated on distributed systems, service-to-service communication, and CI/CD pipelines.

## EDUCATION

### Debre Berhan University

Bachelor of Information Technology (IT)

2020 - 2024

## CERTIFICATE

### Developing Front-End Apps with React [🔗](#)

- Certified in developing dynamic front-end apps with React, including core concepts, state management, routing, API integration, and advanced state management with Redux for scalable applications.

### Developing Back-End Apps with Node.js and Express [🔗](#)

- Certified in developing robust back-end applications with Node.js and Express, covering server-side logic, API development, database integration, and building scalable and efficient solutions.

## PROJECTS

### Dashen Super App

Septemember 2025 - present

- Developed and maintained a Dashen superapp platform using microservices and monorepo architecture. Built scalable backend services in TypeScript/Node.js with Express, covering authentication, user management, messaging, banking integrations Dashen Bank, Mpesa, Telebirr, transaction processing, airtime topups (Ethio Telecom, Safaricom), and utility payments (DSTV, school fees, Flygate).
- Implemented services using MongoDB, Redis, Prisma, Kafka, and Docker, organized in Nx monorepos. Designed RESTful APIs with authentication, rate limiting, and error handling. Collaborated on distributed systems, service-to-service communication, and CI/CD pipelines.

## Food Delivery Web App

July 2024

- Developed a full-stack food delivery web application enabling users to browse restaurants, order meals, and track delivery status in real-time.
- Implemented a responsive frontend with React.js, RESTful APIs using Express.js, and secure user authentication using JWT (Token based authentication) and Implement Redis for Caching that was frequently accessed datas.
- Managed order processing and data persistence with MongoDB, ensuring seamless user experience and efficient backend operations.
- I utilized Redux for robust and predictable state management, gaining hands-on experience in its application.
- I developed expertise in mapping API endpoints and orchestrating their interaction with the front-end application. Furthermore, I configured MongoDB with Node.js to establish a scalable database architecture.

## Ashewa.com E-Commerce Web App

October 2024 - November 2024

- Develop and Maintain the Ashewa.com e-commerce frontend using Vue.js and Nuxt.js, ensuring a fast, responsive user experience.
- Optimized performance, resolved UI/UX issues, and ensured design consistency.
- Also supported the Next.js-based admin dashboard, focusing on component maintenance, data rendering, and usability.
- I integrated GraphQL using best practices, set up email and SMS functionalities on the dashboard, and added data export/download capabilities for the data.
- Managed the immediate deployment of hotfixes to production, often leveraging expedited CI/CD pipelines, followed by the careful integration of the hotfix back into the main development branch () and any active release branches to prevent regressions.

## Bingo Game Management System

July - 2024 - 2025

- Full-stack web application for managing bingo games with multi-tenant shop management. Built interactive bingo game interface with Next.js 15, React 19, and TypeScript featuring real-time number calling, animations, and game controls.
  - Developed RESTful API with Express.js and PostgreSQL using Prisma ORM, implementing JWT authentication, role-based access control, shop approval workflow, and game reporting system.
- Technologies: Next.js, React, TypeScript, Node.js, Express.js, PostgreSQL, Prisma, JWT, Tailwind CSS.

## Wagaye.ashewa.com

2025

- Built using React.js, Tailwind CSS, and Redux for state management.
- Created a clean, user-friendly interface optimized for performance and accessibility.
- Implemented responsive product listings, detailed views Go to store feature.
- Developed with Node.js and Express.js, connected to a MongoDB database.
- Designed and built a RESTful API that handles user authentication, role-based authentication and authorization product management, orders, and analytics.
- Implemented robust error handling and response formatting using industry best practices.

## Guzo Go – Online Travel & Flight Booking Platform

- Developed and maintained core features of Guzo Go, an online travel and flight booking platform enabling users to search, book, and manage airline tickets through a web-based system. Worked across both backend services and the web application, focusing on performance, reliability, and scalable architecture.
- Designed and implemented RESTful APIs using Node.js, Express, and TypeScript
- Built and maintained web interfaces using React
- Developed backend business logic for flight search, booking workflows, and user management
- Integrated third-party services for travel/airline data and payment processing
- Implemented authentication, authorization, and role-based access control
- Ensured type safety, error handling, and API consistency using TypeScript
- Collaborated with product and QA teams to deliver stable and scalable features

## Plant E-commerce Shopping Site

July 2023 - June 2024

- Developed a modern e-commerce web application with React and Redux for Browse and purchasing plants.
- Features include a responsive UI, global state management, product listings, and a shopping cart.
- Integrated RESTful APIs to dynamically fetch plant images from external sources.
- Responsive UI: Designed with a mobile-first approach to ensure seamless usability across smartphones, tablets, and desktops.
- Shopping Cart: Users can add, update, or remove items with state managed using Redux.

- Developed a dynamic web application to manage and organize conferences, allowing users to schedule sessions, register attendees, and view event details.
- Built a responsive and intuitive user interface using React and CSS.
- Leveraged Redux for efficient state management, enabling seamless handling of user interactions and real-time updates across the application.
- I gained hands-on experience in managing state using Redux and implementing it based on best practices.
- I gained hands-on experience integrating open API sources for fetching images.

SKILLS

---

- Front-End Libraries and Frameworks: React.js, Next.js, Bootstrap, and Tailwind CSS.
- Back-End Libraries and Frameworks: Node.js, Express.js, Nest.js, and GO.
- Databases: MongoDB, MySQL, PostgreSQL, PrismaORM and Redis
- Kafka, RabbitMQ and Docker
- MINIO

LANGUAGE

---

**English** Intermediate

**Amharic** Native
