

Tewodros Shimels

Full Stack Developer with experience building responsive, high-performance web applications using JavaScript technologies like React.js, Next.js, Node.js, Nest.js and Express.js. Skilled in creating scalable architectures, optimizing user experience, and integrating WebSocket, RESTful and GraphQL APIs across the full development lifecycle.

WORK EXPERIENCE

Freelancing and Full Stack Developer In Ashewa Technology

Full Stack Developer

Jun - 2022 - present

- Designed and developed full-stack web applications using **React.js, Next.js, Node.js, Express.js, WebSockets Tailwind CSS, Postgres, MongoDB** and **MySQL** with both **Prisma** and **Sequelize ORM**.
- Seamlessly integrated complex **RESTful** and **GraphQL** APIs to connect front-end interfaces with back-end services, ensuring efficient data flow and optimal application performance
- Scalable Back-End Architecture: Built and maintained highly scalable and secure back-end systems using **Express.js** and **Nest.js** for API development, proficiently managing data with **MongoDB** (NoSQL), **Postgres** and **MySQL** (Relational) databases with both **Prisma** and **Sequelize ORM**, and implementing robust role based authentication and authorization mechanisms.
- **Version Control Mastery (Git)**: Deep understanding and application of **Git** principles for efficient code management, including advanced branching strategies (e.g., **Git Flow, GitHub Flow**).
- Implemented full-stack error handling mechanisms, utilizing blocks and **asynchronous** error handling **middleware** (e.g., Express error handlers) on the backend and Error Boundaries in React on the frontend to prevent application crashes and ensure graceful degradation.
- integrated **WebSockets (using Socket.IO)** on both the frontend and backend to enable **real-time communication** features such as live notifications, dynamic order status updates, and instant messaging, enhancing user engagement and responsiveness of the application.

EDUCATION

Debre Berhan University

Bachelor of Information Technology (IT)

2020 -September - June - 2024

CERTIFICATE

Developing Front-End Apps with React From IBM [🔗](#)

Certified in developing dynamic front-end apps with React, including core concepts, state management, routing, API integration, and advanced state management with Redux for scalable applications.

Developing Back-End Apps with Node.js and Express From IBM [🔗](#)

Certified in developing robust back-end applications with Node.js and Express, covering server-side logic, API development, database integration, and building scalable and efficient solutions.

PROJECTS

Check out my portfolio ! [🔗](#)

Food Delivery Web App

July - 2024 - present

Tech Stack: React.js, Node.js, Express.js, MongoDB

- Developed a full-stack food delivery web application enabling users to browse restaurants, order meals, and track delivery status in real-time. Implemented a responsive frontend with React.js, RESTful APIs using Express.js, and secure user authentication using JWT (Token based authentication). Managed order processing and data persistence with MongoDB, ensuring seamless user experience and efficient backend operations.
- I utilized Redux for robust and predictable state management, gaining hands-on experience in its application.
- I developed expertise in mapping API endpoints and orchestrating their interaction with the front-end application. Furthermore, I configured MongoDB with Node.js to establish a scalable database architecture.

Ashewa.com E-Commerce Web App

October - 2024 - November- 2024 - present

Tech Stack: Vue.js, Nuxt.js, Next.js (Dashboard), Tailwind CSS

- Maintained and enhanced the Ashewa.com e-commerce frontend using Vue.js and Nuxt.js, ensuring a fast, responsive user experience. Optimized performance, resolved UI/UX issues, and ensured design consistency. Also supported the Next.js-based admin dashboard, focusing on component maintenance, data rendering, and usability.
- I integrated GraphQL using best practices, set up email and SMS functionalities on the dashboard, and added data export/download capabilities for the data.
- Managed the immediate deployment of hotfixes to production, often leveraging expedited CI/CD pipelines, followed by the careful integration of the hotfix back into the main development branch () and any active release branches to prevent regressions.

Wagaye.ashewa.com

2025 - present

Tech Stack: React.js, Tailwind CSS, Redux, Node.js, Express.js, MongoDB

- Built using React.js, Tailwind CSS, and Redux for state management. Created a clean, user-friendly interface optimized for performance and accessibility. Implemented responsive product listings, detailed views Go to store feature.
- Developed with Node.js and Express.js, connected to a MongoDB database. Designed and built a RESTful API that handles user authentication, role based authentication and authorization product management, orders, and analytics. Implemented robust error handling and response formatting using industry best practices.
- Wagaye.ashewa.com is a dynamic e-commerce platform designed to offer customers the best-priced products from a variety of sellers. I was responsible for developing both the frontend and backend of the application, ensuring a seamless, fast, and responsive user experience across devices

Plant E-commerce Shopping Site

July - 2023 - June - 2024

Tech Stack: React.js, Redux, RESTful API , Tailwind CSS

- Developed a modern e-commerce web application with React and Redux for Browse and purchasing plants. Features include a responsive UI, global state management, product listings, and a shopping cart. Integrated RESTful APIs to dynamically fetch plant images from external sources.
- Responsive UI: Designed with a mobile-first approach to ensure seamless usability across smartphones, tablets, and desktops.
- Shopping Cart: Users can add, update, or remove items with state managed using Redux.

Conference Planner Web App

2023 - 2024

Tech Stack: React.js, Redux, CSS3,

- Developed a dynamic web application to manage and organize conferences, allowing users to schedule sessions, register attendees, and view event details. Built a responsive and intuitive user interface using React and CSS. Leveraged Redux for efficient state management, enabling seamless handling of user interactions and real-time updates across the application.
- I gained hands-on experience in managing state using Redux and implementing it based on best practices.
- I gained hands-on experience integrating open API sources for fetching images.

Tech Stack: PHP, Bootstrap, Css and JQuery

- Built a secure and user-friendly online voting system for university student elections. Contributed to both frontend and backend development, implementing responsive UI with Bootstrap and interactive features using jQuery. Developed server-side logic in PHP for candidate management, vote casting, and real-time result tracking. Utilized MySQL for data storage, ensuring data integrity and secure access control.
- I gained a deep understanding of session-based authentication and authorization using PHP and MySQL databases, along with the principles of designing and managing large databases.

Role-Based Authentication & Authorization System

Feb - 2024 - June - 2024

Tech Stack: Node.js, Express.js, Postgress, Prisma ORM and RestAPI

- Database Schema: Used PostgreSQL with Prisma ORM for defining and managing user, role, and permission relationships.
- Authorization Middleware: Custom middleware functions that check if a logged-in user has the appropriate role to access specific routes. Easily extendable for future roles and permission logic.
- Security Best Practices: Password hashing with bcrypt ,Token expiration and renewal strategies and Input validation and error handling.

SKILLS

- Front-End Libraries and Frameworks: React.js, Next.js, Bootstrap and Tailwind CSS.
- Back-End Libraries and Frameworks: Node.js, Express.js, Nest.js and PHP
- Databases: MySQL, Postgress, PrismaORM, SequalizeORM and MongoDB

LANGUAGE

English Intermediate**Amharic** Native
